# Mobile Application Development

Quiz No 2 (CLO - 2)

**10 marks**

**Question:**

Quiz-2 Activity – Doctor App

Activity Statement:

In this quiz activity, students are required to develop a Doctor App using Flutter that allows doctors to manage patient information efficiently. The app should support basic CRUD (Create, Read, Update, Delete) operations to handle patient records locally. Students should focus on designing a clean, modern, and user-friendly interface suitable for a doctor's daily use.

Key Features to Implement:

1. Patient Management: Add, view, edit, and delete patient records
2. Local Database: Use SQLite for offline data storage
3. File Management: Upload and manage patient documents and images
4. Modern UI: Design a clean, doctor-friendly interface with a attractive color theme.

Submission Instructions:

- Upload the Lib folder to your GitHub repository under the folder name "Quiz 2".
- Include all functionality files (such as database helper, UI screens, and models).
- Add 3 to 6 screenshots showing different parts of your app (e.g., add patient, view list, edit, delete).
- Ensure your project is properly structured and functional.
- Collaborate with the instructor's GitHub account (already added as a collaborator). Deadline: before upcoming lab
